A self-watering window box is a type of planter designed to minimize the need for frequent watering by providing a built-in reservoir that stores water. The plants in the box draw moisture from this reservoir as needed, through a process called capillary action, which helps maintain consistent soil moisture levels. This design helps prevent overwatering or underwatering, making it easier for people to care for plants, especially in sunny window locations or for those who may not have time for daily watering. It's an ideal solution for growing flowers, herbs, or vegetables in urban settings or limited spaces like windowsills or balconies.
