A selfie stick refers to a monopod individuals use to take their photographs by positioning a smartphone or camera extending beyond the normal range of their arms. Selfie sticks are usually extendable metal sticks. They have a handle at one end and an adjustable clamp to hold a phone at the other end. Different types of selfie sticks available in the market include wired, Bluetooth, and remote-triggered.

The Bluetooth selfie sticks product segment dominated this market and is envisaged to enhance its hold over the market by the end of 2023. The primary reason behind this market segment's dominance is the ease of using these sticks without depending on the timer of the smartphone's camera.
