The global Semi-Automatic Biopsy Instrument market size is predicted to grow from US\$ 114 million in 2025 to US\$ 142 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

It is a disposable spring loaded biopsy device used for histological core samples from soft tissue and organs. Two part guillotine type needle with depth marks and echogenic marker placed on the distal tip.

A semi-automatic biopsy instrument is a medical device used to perform tissue biopsies. Tissue biopsy is a common medical examination method used to obtain a sample of the body's internal tissue for pathological examination and diagnosis. Semi-automatic biopsy instruments can assist doctors in tissue biopsy operations, making the biopsy process more accurate, fast and convenient. The semi-automatic biopsy instrument is equipped with a sampling guide system that can help doctors accurately locate the target tissue for accurate biopsy samples. After proper positioning by the doctor, the instrument can automatically cut the tissue sample, reducing the difficulty and risk of manual operation. The semi-automatic biopsy instrument is equipped with a sample collection device, which can collect the cut tissue samples for subsequent pathological examination. The instrument usually has an adjustable cutting depth to meet the biopsy needs of different tissues and depths.
