Abstracts

The global Semi-automatic PET Bottle Blow Molding Machine market size is predicted to grow from US$ 323 million in 2025 to US$ 404 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

In 2024, global production of semi-automatic PET bottle blow molding machines reached 29,621 units, with an average selling price of $10,820 per unit.

A semi-automatic PET bottle blow molding machine is a moderately automated industrial machine specifically designed for processing PET materials into hollow plastic containers. Its core technology is based on a two-step blow molding process: PET preforms are first produced through injection molding. Subsequently, an infrared heating system locally preheats the preforms (focusing on softening the bottle body while keeping the bottle mouth cool and in shape). However, the heated preforms must be manually loaded into the blow mold, and high-pressure air (2.5-3.5 MPa) is activated by a foot switch or button for biaxial stretching. The machine integrates a semi-mechanized control system and supports single- or multi-cavity mold configurations (typically 1-4 cavities). This automates the core processes from preform heating to blow molding, but manual loading and unloading of the preforms and demolding of the finished product are still required. It's suitable for small-batch, high-variety, or special bottle production scenarios (such as irregular-shaped bottles and small-volume bottles), combining low equipment costs with operational flexibility.

United States market for Semi-automatic PET Bottle Blow Molding Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
