Semi-automatic grinding and scraping machines are equipment used for precision grinding and scraping of metal, glass, ceramic and other materials. They combine electric drive and manual control operations to improve the flatness and finish of the workpiece surface. The equipment usually consists of a grinding head assembly, an adjustable workbench, an electronic control system, etc. The operator can manually guide or position the workpiece, and the machine completes a stable and consistent scraping operation. Compared with fully automatic models, semi-automatic grinding and scraping machines have lower costs and stronger adaptability. They are widely used in mold repair, optical processing, mechanical parts finishing and other fields, and are suitable for small and medium-sized batches and high-precision processing tasks.

United States market for Semi-Automatic Scraper is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
