## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Semi-mobile plants are moved from one location to the next as a piggyback load on separate haul units. Each crushing plant comes ready to operate with its own feed hopper, feed conveyor, discharge conveyor, and material transfer belt. The size and design of the crusher naturally depend upon the work that it is intended for. Semi-mobile crushing plants are always to be recommended when a change of location in long periods is required in order to optimize the raw material transportation- and operational-costs of the quarry department.
