The global Semi-permanent Feeding Tubes market size is predicted to grow from US\$ 946 million in 2025 to US\$ 1413 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Semi-permanent feeding tubes are medical devices designed for long-term but not permanent use in patients who need nutritional support. These tubes, such as gastrostomy (G-tubes) or jejunostomy (J-tubes), are inserted into the stomach or small intestine to deliver nutrients directly into the digestive system. They are typically used for individuals with chronic conditions that impair swallowing or digestion, such as neurological disorders, cancers, or severe injuries. While semi-permanent feeding tubes can be in place for months or even years, they are designed to be removed once the patient's condition improves or when no longer necessary.

Fresenius Kabi, Cardinal Health and Nestle are the top 3 companies in global gastrostomy feeding tube (G-tube) market and account for about 40% of total market share. Geographically speaking, Americas holds about 35% of global market share, followed by APAC with about 30% share. In terms of type, low profile G-tube segment holds an important share of over 50%. In terms of application, over 60% of the gastrostomy feeding tube (G-tube) are for adult.
