The global Semi-Refined Paraffin Wax for Candles market size is predicted to grow from US\$ 931 million in 2025 to US\$ 1273 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Semi-refined paraffin wax for candles is a type of semi-refined paraffin wax specifically optimized for candle manufacturing processes, possessing excellent physical properties and processing adaptability. Its oil content is typically controlled between 0.8% and 1.2%, ensuring appropriate flexibility while effectively reducing smoke and odor generation. With a melting point range of 58?62?C, it imparts good thermal stability and resistance to deformation, making it suitable for use and storage under various climatic conditions. This type of paraffin wax exhibits excellent formability, combustion stability, and fragrance compatibility, releasing aroma evenly and producing a stable flame with minimal residue during combustion, making it highly favored by scented candle manufacturers. It is widely used in the production of various candle products, including column candles, tea candles, craft candles, religious candles, and festive candles, serving as a crucial material foundation bridging traditional craftsmanship and modern consumer demands. The average price of this product is approximately US\$1100 per ton, with global sales of approximately 950,000 tons.

Semi-refined paraffin wax for candles is one of the largest segments of global paraffin wax consumption, widely used in daily lighting, decoration, religious ceremonies, and aromatherapy. In recent years, with increasing emphasis on quality of life and ambiance, the market for scented candles, festive candles, and religious candles has continued to expand, particularly in Asia, Latin America, and the Middle East, where consumer demand has shown steady growth. These regions have a high reliance on candles for cultural traditions, festivals, and religious activities, further driving market

activity. At the same time, rising global environmental awareness is subtly changing the development direction of this traditional category. Consumers and manufacturers are increasingly concerned about the combustion safety, air quality impact, and raw material sustainability of candle products. Therefore, future semi-refined paraffin wax products will be optimized towards lower oil content and lower smoke emissions, and will gradually incorporate renewable ingredients such as plant waxes and bio-based materials for blending and modification to meet green consumption trends and regulatory requirements.
