The global Semi Rigid Coaxial Cable market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Semi-rigid coaxial cable is a radio frequency cable used for high-frequency signal transmission, with a rigid metal outer conductor, usually a copper or aluminum tube. Its main features are low loss, high shielding performance and good electrical properties, making it very suitable for high-precision applications in the microwave frequency band (usually from hundreds of MHz to tens of GHz). Due to its rigid outer conductor, semi-rigid cable has higher mechanical stability and transmission performance stability than conventional flexible cables. The internal structure of semi-rigid coaxial cable is similar to that of standard coaxial cable, including a central conductor wrapped by an insulating medium and a rigid metal shielding layer on the outside. The rigid design of the outer conductor greatly improves the shielding effect and can effectively prevent electromagnetic interference (EMI) and signal leakage. Although the outer conductor is rigid, it can be bent and formed with appropriate tools to keep it in a stable shape in a fixed installation environment.

United States market for Semi Rigid Coaxial Cable is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
