Semi-shading coated fabric products are made of polyester fiber as the main raw material to form the base fabric. The base fabric is then impregnated or coated on both sides with a water-based acrylic emulsion to achieve a sunshade effect of 50% to 90%. The main feature of this type of product in terms of production technology is that the fabric is impregnated or coated with a single layer after weaving. According to the different types of production processes, it can be divided into double-sided slurry scraping process and slurry dipping process. This type of product has the characteristics of blocking sunlight and transmitting visible light, while retaining the natural texture and pattern of the fabric to a certain extent.

The global Semi shading Coated Fabric market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
