The global Semi-Shielded Power Inductor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Semi-Shielded Power Inductor is a power inductor with partial electromagnetic shielding characteristics, specially designed to provide current regulation and energy storage in power circuits. Unlike fully shielded inductors, semi-shielded inductors reduce electromagnetic interference (EMI) while retaining certain open magnetic field characteristics to achieve higher efficiency and cost performance. This type of inductor is typically used in applications that require moderate EMI suppression while requiring higher performance and lower cost.
