According to our LPI (LP Information) latest study, the global Semiconductor Abatement Systems market size was valued at US\$ 808 million in 2023. With growing demand in downstream market, the Semiconductor Abatement Systems is forecast to a readjusted size of US\$ 1700.4 million by 2030 with a CAGR of 11.2% during review period.

The research report highlights the growth potential of the global Semiconductor Abatement Systems market. Semiconductor Abatement Systems are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Semiconductor Abatement Systems. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Semiconductor Abatement Systems market.

The semiconductor industry uses gases that are toxic, flammable and even harmful for the environment, but also for humans. For example, in the production of microchips. According to national legislation, these gases have to be abated. This means that they are reduced below the respective threshold limit value (TLV). Different gases require different treatment technologies, such as thermal, wet or even a combination of both technologies. The process exhaust gases can then be released into the atmosphere, without harming nature, for a greener world.

Global key players of semiconductor abatement systems include Ebara, Busch Vacuum Solutions, GST (Global Standard Technology), Edwards Vacuum, CS Clean Solutions,

etc. The top five players hold a share over 60%. Europe is the largest market, has a share about 24%. In terms of product type, Combustion-wash Type is the largest segment, occupied for a share of 29%, and in terms of application, IDM has a share about 50 percent.
