The global Semiconductor Ball Mounting market size is predicted to grow from US\$ 217 million in 2025 to US\$ 399 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

Semiconductor Ball Mounting is a piece of equipment in semiconductor manufacturing, mainly used to permanently connect wafers of different materials. As part of the back-end engineering of semiconductor production, bonding metal wires and ceramic riving knives are used to perform ball bonding on the electrodes in the chip before wafer cutting, and the wire tails are cut to form protruding electrodes (threads). pillar bump) process. After the ball is planted, the protruding electrodes of the chip are connected through the key flip chip process to form an electronic circuit.

According to the SEMI, global sales of semiconductor equipment was US\$ 109 billion in 2022, a year-on-year increase of 5.6%. Mainland China is the largest semiconductor equipment market in the world. For the third consecutive year, China remained the largest semiconductor equipment market in 2022 despite a 5% slowdown in the pace of investments in the region year over year, accounting for \$28.3 billion in billings. China Taiwan, the second-largest destination for equipment spending, recorded an increase of 8% to \$26.8 billion, marking the fourth straight year of growth for the region. Equipment sales to Korea contracted 14% to \$21.5 billion. Annual semiconductor equipment investments in Europe surged 93%, while North America logged a 38% increase. Sales to the Rest of World and Japan increased 34% and 7% year over year, respectively.
