## Abstracts

The global Semiconductor Cleanroom Wipers market size is predicted to grow from US\$ 542 million in 2025 to US\$ 854 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

The application scenarios of cleanroom wipers in the semiconductor industry are very extensive. Firstly, cleaning is crucial in the manufacturing and assembly process of semiconductor devices. The equipment and components on the production line need to be regularly cleaned to maintain their good working condition. As a specialized cleaning tool, dust-free cloth can effectively remove dust and impurities from the surface of equipment, ensuring the normal operation of the production line. Secondly, dust-free cloth can also be used to clean the production environment of semiconductor devices, including clean rooms and purification workshops. These environments need to be kept highly clean to prevent tiny dust and impurities from affecting the product. Dust free cloth has excellent dust removal effect and anti-static function, which can meet the cleaning needs of these environments. In addition, dust-free cloth can also be used to clean the packaging and transportation process of semiconductor devices, ensuring the cleanliness and integrity of products throughout the entire supply chain. In 2025, global Semiconductor Cleanwiper production reached approximately 44.86 K MT, with an average global market price of around US\$ 12,342 per MT.

The annual production capacity of semiconductor cleanroom wipers is 60 K MT, with a gross profit margin of about 25%.

Upstream: The main raw materials for semiconductor dust-free wiping cloths are high-purity polyester fibers, ultrafine fiber materials, and some auxiliary materials,

Downstream: Mainly used in semiconductor wafer manufacturing, photolithography, etching, CMP polishing, equipment maintenance, packaging testing, and advanced electronic manufacturing fields, it also extends to panel display, hard disk manufacturing, and precision optics industries.

Raw material costs account for approximately 40% to 50%, clean production and energy consumption costs account for approximately 15% to 20%, manufacturing and equipment depreciation costs account for approximately 15% to 20%, testing and quality control costs account for approximately 5% to 10%, and packaging and logistics costs account for approximately 5% to 8%.
