A Semiconductor Equipment Sensor is a device used in semiconductor manufacturing equipment to monitor, measure, and control various parameters during the production of semiconductor wafers. These sensors detect physical, chemical, or environmental conditions such as temperature, pressure, gas flow, humidity, vibration, or particle levels within the equipment. The data collected helps ensure optimal conditions for processes like lithography, etching, deposition, and cleaning, thereby improving product quality, process efficiency, and equipment performance. Accurate monitoring with these sensors is crucial for maintaining the precision required in semiconductor fabrication.
