Semiconductor Fab Process Exhaust Systems refer to dedicated fab utility systems used to collect, segregate, convey and control process exhaust streams generated by semiconductor manufacturing tools and auxiliary process equipment. These systems serve wet cleaning, wet etching, dry etching, deposition, diffusion, ion implantation, lithography, CMP and other fab process areas where acidic, alkaline, solvent-based, toxic, particulate-laden, high-temperature or general process exhaust streams must be routed through dedicated duct networks under controlled negative pressure and stable airflow conditions. A typical system includes coated or uncoated process exhaust ducts, corrosion-resistant dampers, control dampers, isolation dampers, backdraft dampers, fire dampers, elbows, tees, reducers, flanges, gaskets, hangers, airflow and differential-pressure monitoring devices, dedicated control units, main exhaust duct networks, tool hook-up ducts, system balancing, airtightness testing, field installation and commissioning services.
