According to our LPI (LP Information) latest study, the global Semiconductor Gas Abatement Systems market size was valued at US\$ 1236.1 million in 2023. With growing demand in downstream market, the Semiconductor Gas Abatement Systems is forecast to a readjusted size of US\$ 2483 million by 2030 with a CAGR of 10.5% during review period.

The research report highlights the growth potential of the global Semiconductor Gas Abatement Systems market. Semiconductor Gas Abatement Systems are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Semiconductor Gas Abatement Systems. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Semiconductor Gas Abatement Systems market.

The semiconductor industry uses gases that are toxic, flammable and even harmful for the environment, but also for humans. For example, in the production of microchips. According to national legislation, these gases have to be abated. This means that they are reduced below the respective threshold limit value (TLV). Different gases require different treatment technologies, such as thermal, wet or even a combination of both technologies. The process exhaust gases can then be released into the atmosphere, without harming nature, for a greener world. The top three manufacturers of gas emission reduction systems for the semiconductor industry are Ebara Machinery, Busch Vacuum Solutions, and GST (Global Standard Technology), which together account for

about 60% of the total. Combustion wet-type and dry-type gas emission reduction systems for the semiconductor industry are the top two in all categories, accounting for 50.22% of the total.
