Isostatic graphite material is a new type of graphite material with a particle size between 5-20 μ m. It is molded by isostatic pressing and has a density of about 1.80kg/m³. The product is isotropic, has fine particles and smooth surface, and can be used for precision processing. It is widely used in a series of mid-to-high-end industries such as photovoltaics, semiconductors, lithium batteries, hydrogen energy, aerospace, and military industries, and significantly determines the quality of related products. Semiconductor-grade isostatic graphite has a complex formula, long manufacturing cycle, and long process flow. The entire process has more than 300 process control points. It is extremely difficult to develop and manufacture, has the highest technical difficulty, and is the most expensive.

The global Semiconductor Grade Isostatic Graphite market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
