Abstracts

The global Semiconductor-Grade Perfluoropolyether (PFPE) Lubricant market size is predicted to grow from US$ 245 million in 2025 to US$ 399 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Semiconductor-grade perfluoropolyether lubricant is a high-cleanliness oil, grease or vacuum fluid based on PFPE. It offers very low vapor pressure and volatility, strong chemical inertness, wide-temperature performance and broad compatibility with engineering materials. Semiconductor grades place additional emphasis on low outgassing, low particle generation and long-term vacuum stability and are used in vacuum pumps, robots, bearings, guides, valves and seals. In 2025, global Semiconductor-Grade Perfluoropolyether (PFPE) Lubricant production reached approximately 4,200 tons.

Advanced wafer tools increasingly operate under high vacuum, elevated temperature and reactive chemicals, conditions where conventional hydrocarbon and silicone lubricants struggle to combine low outgassing, chemical resistance and long life.

Higher tool automation and motion precision make particle generation and lubricant life in robots, linear guides, bearings and valves increasingly important to uptime and wafer defect control.

Fabs are extending maintenance intervals and raising equipment utilization, driving PFPE lubricants toward longer relubrication intervals, lower volatility and finer viscosity selection while reinforcing long-term OEM qualification.
