The global Semiconductor Horizontal LPCVD market size is predicted to grow from US\$ 129 million in 2025 to US\$ 159 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

Semiconductor Horizontal LPCVD (Low-Pressure Chemical Vapor Deposition) is a specific configuration of LPCVD equipment used in semiconductor manufacturing. It is designed for the deposition of thin films onto semiconductor wafers in a horizontal orientation. In this configuration, wafers are placed horizontally on a wafer carrier or susceptor, and the deposition process takes place as precursor gases flow over the wafers.

The 'low-pressure' aspect of LPCVD refers to the reduced pressure environment within the deposition chamber, which is carefully controlled to optimize the growth of high-quality thin films. The horizontal configuration offers certain advantages for specific deposition processes.

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating

the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
