The global Semiconductor IP Modules market size is predicted to grow from US$ 1372 million in 2025 to US$ 1959 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

Semiconductor IP Modules refer to pre-designed, reusable functional blocks of intellectual property (IP) that are integrated into semiconductor devices such as System-on-Chip (SoC) designs or other integrated circuits (ICs). These IP modules provide key functionalities and can range from complex components like processor cores to simpler modules such as I/O interfaces or communication protocols. Semiconductor IP modules are licensed by semiconductor designers to avoid the need to develop these functionalities from scratch, saving time, reducing costs, and improving the overall design quality.
