The global Semiconductor Jet Scrubber market size is predicted to grow from US\$ 267 million in 2025 to US\$ 380 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

In 2025, global semiconductor jet scrubber production reached approximately 607 units, the average price is 450 k usd/unit. Semiconductor jet scrubber is a special type of wet scrubber in semiconductor process exhaust gas treatment system. It combines high speed jet principle with chemical absorption or particle capture function, and is widely used to remove acidic, alkaline and particulate exhaust gases generated in semiconductor production process.

The continuous evolution of semiconductor manufacturing processes and the continuous expansion of global production capacity have created a steady and growing demand for semiconductor process exhaust scrubbers. The core driving force comes from two aspects: first, the high standard, point-specific exhaust gas treatment system that must be equipped in new wafer factories; second, as more special gases are used in advanced processes, existing production lines must upgrade their cleaning equipment to meet stricter environmental and safety regulations. The business opportunities behind this are rich in layers: the primary opportunity lies in providing customized solutions for the emerging semiconductor industry chain; the greater value lies in shifting from supplying a single device to providing intelligent systems that integrate real-time monitoring, intelligent control and predictive maintenance to help customers improve operational efficiency and reduce overall costs, thus establishing competitive barriers in the highly demanding semiconductor high-end market.

The annual production capacity of a single semiconductor jet scrubber production line is

typically 100-120 units per year, with a gross profit margin of around 26%.

Downstream users of semiconductor jet scrubbers include PCB manufacturing (39%), semiconductor substrates (43%), other sectors (18%).

United States market for Semiconductor Jet Scrubber is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
