The report requires updating with new data and is sent in 48 hours after order is placed.

The global Semiconductor Laser Marking Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The working principle of semiconductor laser pumped solid-state laser (DPSSL) for laser marking is to use high-power semiconductor quantum well laser instead of gas lamp to pump solid-state crystal as a gain medium laser resonator, so that it can generate new wavelengths of laser light. The back-up frequency mixing interaction should produce lasers with wavelengths such as SHG and THG. Through design and establishment, the entire laser marking process, operating procedures and quality standards from re-inspection of incoming materials, assembly production, process inspection, final assembly and commissioning to finished product general inspection have been established.

According to our Semiconductor Research Center, in 2022, the global semiconductor equipment was valued at US\$ 109 billion. China mainland, China Taiwan and South Korea have a combined market share over 70%. North America, Europe and Japan, have a combined market share of 23%. The key drivers are high performance computing, AI, cloud computing, Servers, 5G and EV (electric vehicle), etc.
