A semiconductor LED (Light Emitting Diode) yellow light is a type of LED that emits yellow light. LEDs are electronic devices that emit light when an electric current is passed through them. They are made of semiconductor materials, such as gallium arsenide or gallium phosphide, which have specific energy band gaps that determine the color of light they emit.

Yellow LEDs are commonly used in various applications, including traffic lights, indicator lights, signage, and display panels. They are preferred for these applications because of their high energy efficiency, long lifespan, and ability to produce bright and vibrant yellow light. Yellow LEDs can be found in different shades of yellow, ranging from pale yellow to deep amber, depending on the specific materials and manufacturing processes used.
