The so-called 'Molding' refers to the molding process in which the semiconductor is electrically insulated from the outside by resin encapsulation. It protects the chip by injecting fluid resin from the gate around the semiconductor chip and curing it. Automatic molding machine refers to the fully automatic semiconductor packaging process equipment that automatically transports the lead frame from the feeding box for plastic sealing, and then removes the residual glue and then transports it to the discharging box.

The prices in this report are for individual machines and do not include molds.
