The global Semiconductor Oxidation Diffusion Equipment market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Oxidation is a process in which a silicon wafer is placed in an atmosphere of an oxidant such as oxygen or water vapor for high temperature heat treatment, and a chemical reaction occurs on the surface of the silicon wafer to form an oxide film. Diffusion refers to doping impurity elements into the silicon substrate according to the process requirements by using the principle of thermal diffusion under high temperature conditions, so that it has a specific concentration distribution, thereby changing the electrical properties of the silicon material. Annealing refers to the process of heating the silicon wafer after ion implantation to repair the lattice defects caused by ion implantation. There are three basic types of equipment used for oxidation/diffusion/annealing: horizontal furnaces, vertical furnaces and rapid temperature rise furnaces (RTP).

The global market for semiconductor was estimated at US$ 579 billion in the year 2022, is projected to US$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.71% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating

the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
