A particle counter is an instrument used to measure the number of tiny particles in the air. It determines air quality and pollution levels by detecting and counting tiny particles in the air such as dust, smoke, bacteria, pollen, etc. Particle counters typically use principles such as light scattering, ionization, or electrical resistance to detect and count particles, then display the result as a particle concentration or number of particles. The semiconductor particle counter design can be used for the measurement of special material gases in the semiconductor field.
