According to our LPI (LP Information) latest study, the global Semiconductor Photoresist Stripper market size was valued at US\$ 411.2 million in 2023. With growing demand in downstream market, the Semiconductor Photoresist Stripper is forecast to a readjusted size of US\$ 658.6 million by 2030 with a CAGR of 7.0% during review period.

The research report highlights the growth potential of the global Semiconductor Photoresist Stripper market. Semiconductor Photoresist Stripper are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Semiconductor Photoresist Stripper. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Semiconductor Photoresist Stripper market.

It is the removal of unwanted photoresist layers from the wafer. Its objective is to eliminate the photoresist material from the wafer as quickly as possible, without allowing any surface materials under the resist to get attacked by the chemicals used. The Semiconductor Photoresist Stripper market covers Positive Photoresist Stripper, Negative Photoresist Stripper.

In the photolithography process, the photoresist is uniformly coated on the substrate, and after exposure (the latent image is generated by local light irradiation, and the solubility of the local photoresist is changed), development (using the developer to dissolve the modified photoresist) Soluble part) and etching and other processes, the

pattern on the mask is transferred to the substrate to form a geometric pattern completely corresponding to the mask. At the end of patterning (i.e., after coating, imaging, ion implantation, and etching of the photoresist layer), the photoresist residue needs to be completely removed before proceeding to the next process step. Ion bombardment during the doping step hardens the photoresist polymer, making the photoresist less soluble and more difficult to remove.

The global top five manufacturers of semiconductor photoresist stripper include DuPont, Entegris, Merck KGaA, Fujifilm, and Mitsubishi Gas Chemical, which together account for more than 70% of the market share. Among them, the largest manufacturer is DuPont, with a market share of more than 20%. North America is the most important producing area for semiconductor photoresist strippers in the world, with a market share of about 65%. In terms of type, positive photoresist stripper has a market share of over 70%. In the application field, integrated circuit manufacturing accounts for more than 90% of the market.
