## Abstracts

The global Semiconductor Refrigerators market size is predicted to grow from US\$ 3545 million in 2025 to US\$ 5500 million in 2031; it is expected to grow at a CAGR of 7.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report focuses on Semiconductor Refrigerators market.

Semiconductor Refrigerators (or called Solid-State Refrigerators) uses the Peltier Effect: passing a current through the junction of two different semiconductor elements (p-type and n-type) decreases the temperature at the junction, adsorbing heat from the environment. Also known as thermoelectric cooling, it operates using electricity inputs and a heat sink, but without traditional hardware associated with refrigerants and compressors.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0%

year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
