The global Semiconductor Temporary Adhesive Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Temporary bonding adhesives are used in manufacturing to hold two substrates together during a specific process and later must be separated and cleaned. Thin substrates are much too fragile to be handled by normal tooling and as such are temporarily bonded onto rigid supports, commonly referred to as carriers. The adhesives are commonly formulated to exhibit properties that withstand the rigors of the manufacturing process such as thermal and chemical exposure, while allowing simple separation and cleaning when finished. Semiconductor Temporary Adhesive Material Innovative temporary bonding and debonding materials for semiconductor advanced packaging solve complex design and processing challenges. The statistical scope of this report includes adhesives and adhesive tapes, etc.
