According to our LPI (LP Information) latest study, the global Semiconductor Third-party Testing market size was valued at US\$ million in 2023. With growing demand in downstream market, the Semiconductor Third-party Testing is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Semiconductor Third-party Testing market. Semiconductor Third-party Testing are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Semiconductor Third-party Testing. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Semiconductor Third-party Testing market.

In recent years, more and more integrated circuit design and wafer manufacturing companies have given up the capacity expansion of the test link, and entrusted their test requirements to third-party integrated circuit testing Enterprises, independent third-party integrated circuit test companies are gradually becoming an indispensable part of the integrated circuit industry chain: on the one hand, third-party test companies can reduce repeated investment in test equipment, reduce test costs through scale effects, and reduce product production costs. On the other hand, third-party testing companies under the specialized division of labor can more quickly follow up with the update of integrated circuit testing technology, and provide diversified testing services for integrated circuit design, wafer manufacturing and packaging companies in a timely

manner.

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
