The global Semiconductor Wire Bonder market size is predicted to grow from US\$ 1315 million in 2025 to US\$ 1953 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

A semiconductor wire bonder is a packaging machine used to connect semiconductor chips and package substrates or leadframes through fine wire or ribbon bonding, typically using ball bonding or wedge bonding processes. It is one of the most important assembly tools in semiconductor packaging, power electronics, LEDs, sensors, and advanced microelectronics because it directly affects throughput, yield, electrical performance, and reliability. In 2025, Global semiconductor wire bonder shipments are estimated at 6,400 units, with an average ex-works price of 210 k US\$/unit and global capacity is about 9,500 units per year, with a gross margin range of 32%-45%.

The semiconductor wire bonder market is primarily driven by sustained demand for mature-node packaging, power semiconductor packaging, and cost-effective interconnect solutions in automotive, industrial, and analog devices. Even as advanced packaging grows, wire bonding remains widely used because it offers a strong balance of cost, productivity, and process maturity, especially in mainstream ICs, discrete devices, sensors, LEDs, and power modules.
