The global Sendust Core Powder Forming Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Sendust magnetic core powder forming machine is a precision equipment specially used to press sendust alloy powder into a specific shape and size. Sendust magnetic powder core is mainly produced from alloy powder of 85% Fe (iron), 9% Si (silicon) and 6% Al (aluminum). A soft magnetic composite material. The sendust powder forming machine applies high pressure to the powder through the mold, causing the powder particles to displace, deform and finally combine tightly to form a molded part with a certain strength and density. This process usually includes three basic steps: filling, pressing and demolding, and each step requires precise control to ensure the quality of the finished product.

The rapid development of the power electronics market is the main driving force for the market demand for Sendust core powder forming machines. The advancement of new energy generation and electrification has led to an increasing demand for the power electronics market, which in turn has led to a greater demand for Sendust core powder forming machines. The rapid growth of the communications market has also provided a broad space for the Sendust core powder forming machine market. With the rapid development of 5G communication technology, the demand for the communications equipment market has increased significantly. As an important component in communications equipment, the market demand for ferrosilicon magnetic powder cores will also increase accordingly. In addition, with the development of electronic products towards high frequencies, the demand for Sendust cores in high-frequency applications will increase. This will prompt companies to continuously improve product performance

to adapt to changes in market demand. The rapid development of the new energy market will also bring new opportunities to the Sendust core powder forming machine market. With the advancement of new energy generation, the demand for ferrosilicon magnetic powder cores in new energy equipment such as converters and inverters will increase significantly. In summary, the Sendust core powder forming machine market has broad development prospects and potential.
