The global Sensor Readout IC market size is predicted to grow from US\$ 11058 million in 2025 to US\$ 21425 million in 2032; it is expected to grow at a CAGR of 10.0% from 2026 to 2032.

Sensor Readout IC (Sensor Readout Integrated Circuit) is a specialized integrated circuit designed to receive, amplify, condition, convert, and process electrical signals generated by sensors. It serves as the interface between sensing elements and digital processing systems, performing functions such as signal amplification, filtering, analog-to-digital conversion (ADC), calibration, compensation, and communication. Sensor Readout ICs are widely used in pressure sensors, tactile sensors, temperature sensors, MEMS sensors, biosensors, optical sensors, and industrial sensing systems to improve signal accuracy, sensitivity, and reliability. In 2025, global Sensor Readout IC production reached approximately 3.14 B units, with an average global market price of around US\$ 3.6 per unit. Annual production capacity is 3.4 B units. Gross Profit Margin: 52%. Sensor Readout IC / Sensor AFE IC sits in the midstream of the sensor signal chain industry. The upstream mainly includes semiconductor foundries (e.g., TSMC, GlobalFoundries), analog/mixed-signal design IP, and key materials such as silicon wafers and packaging substrates. The midstream consists of IC design companies that develop signal conditioning, amplification, ADC conversion, and interface integration functions. The downstream demand comes from automotive electronics, industrial automation, robotics, medical devices, consumer electronics, and IoT systems, where sensor density and accuracy requirements continue to increase. This product category is transitioning from traditional ?supporting IC? to a core enabling layer for intelligent sensing systems. As robotics, automotive ADAS, and humanoid applications scale, sensor readout ICs are becoming more fragmented by use-case, with increasing demand for higher resolution, lower noise, and multi-channel integration. The market is also shifting from discrete AFE solutions toward highly integrated sensor front-end SoCs, driven by cost reduction and system-level optimization.

United States market for Sensor Readout IC is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Sensor Readout IC is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Sensor Readout IC is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
