A Sentiment Analysis System, also known as sentiment analysis or opinion mining, is a system or software application designed to analyze and determine the sentiment expressed in a piece of text. The primary goal of sentiment analysis is to identify and classify subjective information in text data, such as opinions, sentiments, emotions, and attitudes, as positive, negative, or neutral. This technology is widely used in various industries to gain insights into public opinion, customer feedback, social media sentiment, and more.

There is a continuous exploration of advanced machine learning models, including transformer-based models such as BERT (Bidirectional Encoder Representations from Transformers) and GPT (Generative Pre-trained Transformer), for sentiment analysis.
