A Separated Hopper Loader is an automatic material conveying system widely used in plastic processing industries such as injection molding and extrusion. It consists of two main parts: the main unit (motor and control system) and the hopper receiver, which are physically separated. The main unit is typically placed on the ground and generates vacuum pressure to convey plastic pellets or other materials through a hose into the hopper mounted on the processing machine. This design reduces machine load, minimizes noise near the molding machine, and facilitates maintenance and filter cleaning. Separated hopper loaders are ideal for multi-machine centralized feeding systems and are often equipped with intelligent controllers to set suction time, unloading time, and material shortage alarms, ensuring efficient, clean, and consistent material feeding in automated production environments.

United States market for Separated Hopper Loader is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Separated Hopper Loader is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
