The global Separation Membrane Permeability Analyzer market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A Separation Membrane Permeability Analyzer is a device used to measure the permeability of separation membranes, which are thin films or sheets that can separate different materials based on their properties. These membranes are widely used in various applications such as water treatment, gas separation, and molecular filtration.The analyzer measures the permeability of the membrane by subjecting it to a pressure difference across its surface and measuring the resulting flow rate of the fluid passing through it. This helps to determine the effectiveness of the membrane in separating different materials and assists in optimizing its design and performance.
