The global Serial Attached SCSI Technology market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Serial Attached SCSI technology is designed to move data to and from computer storage devices such as hard drives and tape drives. It is a point-to-point serial protocol that replaces parallel SCSI. SCSI first appeared in enterprise data centers in the mid-1980s. SAS uses the standard SCSI command set. It is currently slightly slower than the eventual parallel SCSI implementation, but in 2009 it will double the current speed to 6Gbit/s. This will allow for higher data transfer speeds. The protocol is 'downward' compatible with second-generation SATA hard drives. These drives can be connected to a SAS backplane (controller), but SAS drives cannot be connected to a SATA backplane.

United States market for Serial Attached SCSI Technology is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Serial Attached SCSI Technology is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Serial Attached SCSI Technology is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
