With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Serializer-Deserializer (SERDES) is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Serializer-Deserializer (SERDES) market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Serializer-Deserializer (SERDES) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Serializer-Deserializer (SERDES). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Serializer-Deserializer (SERDES) market.

SERDES IP stands for Serializer/Deserializer Intellectual Property. It refers to a specialized electronic design component or module that facilitates the transmission of serial data over high-speed communication interfaces. SERDES technology is commonly used in various applications, including data communication, networking, telecommunications, and storage systems.

SERDES IP is typically implemented as a digital integrated circuit (IC) and is often provided as intellectual property (IP) by semiconductor companies or IP vendors. It incorporates the necessary circuitry and algorithms to convert parallel data into a

serialized format for transmission and then convert the received serialized data back into parallel form for processing.

The primary purpose of SERDES IP is to enable the efficient and reliable transfer of data across high-speed interfaces while minimizing signal degradation and noise interference. It handles tasks such as data serialization, clock recovery, signal conditioning, and error detection and correction.

The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

According to our Communications Research Centre, in 2022, the global communication equipment was valued at US\$ 100 billion. The U.S. and China are powerhouses in the manufacture of communications equipment. According to data from the Ministry of Industry and Information Technology of China, the cumulative revenue of telecommunications services in 2022 was ?1.58 trillion, an increase of 8% over the previous year. The total amount of telecommunications business calculated at the price of the previous year reached ?1.75 trillion, a year-on-year increase of 21.3%. In the same year, the fixed Internet broadband access business revenue was ?240.2 billion, an increase of 7.1% over the previous year, and its proportion in the telecommunications business revenue decreased from 15.3% in the previous year to 15.2%, driving the telecommunications business revenue to increase by 1.1 percentage points.
