The global Sericin Powder Protein market size is predicted to grow from US\$ 127 million in 2025 to US\$ 214 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2025, global Sericin Powder Protein production reached approximately 2,000 tons, with an average global market price of around 65 USD/Kg.

Sericin Powder Protein is a water-soluble natural protein extracted, purified, and dried from the sericin layer of silk cocoons, composed of 18 amino acids with high purity, featuring moisturizing, antioxidant, and skin-friendly properties, and is a non-toxic functional material.

The average single-line production capacity of Sericin Powder Protein is 300 tons, the average gross profit margin was 45.6%.

The sericin powder protein industry chain consists of three linked links: the upstream is dominated by silk cocoons (core raw material) from silkworm breeding and mulberry planting, supplemented by extraction auxiliary materials; the midstream focuses on degumming, extraction, purification, drying, and powder processing to produce finished products; the downstream covers cosmetics, food, biomedicine, and textiles industries that use it as additives or raw materials.

The cost structure of sericin powder protein has clear weight proportions: raw material costs account for 45%-55% (the largest share, mainly silk cocoons), processing costs account for 20%-25% (including processes and auxiliary materials), labor costs account for 10%-15%, and other costs (R&D, inspection, packaging) account for 5%-10%.

Driven by demand for natural functional products, sericin powder protein is in steady growth, with the cosmetics industry as the main demand market and the food industry growing fastest; policy support, technological breakthroughs, and global recognition of natural materials bring broad opportunities, especially in high-purity and customized products with high added value and export potential.
