Server hosting refers to the offsite management and maintenance of hardware resources that are selected for a company's use. The adoption of cloud and related services has increased due to the competitive advantages offered by cloud computing in business communication, operations, and other crucial organizational functions. Enterprises with a higher employee count require a large and complex communication set up to work efficiently. Moreover, with server hosting services, the efforts required to set up new equipment for business communication has drastically reduced. With increasing enterprise sizes, the need for robust communication tools has also increased. These factors have led to an increase in demand for server hosting services.
