The global Servo Cold Heading Machine market size is predicted to grow from US\$ 597 million in 2025 to US\$ 937 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global Servo Cold Heading Machine production reached approximately 4,067 sets, with an average global market price of around USD 150,000 per set.

The gross profit margin of major companies in the industry is between 20.28%?35.64%.

In 2025, the global production capacity of Servo Cold Heading Machine was approximately 5,351 sets.

Servo Cold Heading Machine is a metal forming machine that uses servo drive systems to produce fasteners and precision cold-formed parts from wire or bar materials at room temperature. Compared with conventional mechanical cold heading machines, servo models offer better forming control, flexible stroke adjustment, lower noise, higher energy efficiency and improved suitability for complex parts. The product is mainly used to manufacture screws, bolts, rivets, automotive fasteners, electronics fasteners and special-shaped cold-formed components. The market excludes traditional non-servo cold heading machines, hot forging machines and general stamping presses.

The industry chain includes castings, forged components, servo motors, drives, control systems, tooling, bearings, linear guides, hydraulic and lubrication systems, electrical components and safety devices. Midstream production covers structural machining, precision assembly, servo control integration, tooling adaptation, testing and commissioning. Downstream users include fastener producers, automotive parts

manufacturers, electronics hardware plants, machinery component suppliers and precision metal forming workshops. Demand is driven by high-strength fasteners, automotive lightweighting, electronics miniaturization, labor-saving automation and replacement of older mechanical equipment.

Standard fastener, automotive small metal part and electronic component manufacturing fuel the upgrade of servo cold heading machines. Servo precise control improves product dimensional accuracy and raw material utilization. Flexible mold switching shortens batch production changeover time.
