Servo Electric Press Brake pressing force using synchronized two servo motors which transfer the power with the help of special belts and pulleys. During the upper beam down movement, servo motors coil the belt to the main pulley and apply the bending force. Servomotors position the ram to air-bend components accurately. They offer high-speed operation, with the ram descending quickly, stopping at a predetermined bending-speed position, creeping downward to bend the workpiece, and then moving quickly upward to the top dead center (TDC).
