Abstracts

The global Servo IS Machine market size is predicted to grow from US\$ 311 million in 2025 to US\$ 520 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

A Servo IS Machine, or servo-driven Individual Section Machine, is an advanced glass container forming machine used to produce bottles, jars, vials, and other hollow glass containers. Compared with traditional pneumatic IS machines, it uses servo-electric mechanisms to control key motions such as invert, take-out, pusher, gob handling, plunger, baffle, or blow head movement. Servo control improves motion accuracy, repeatability, setup speed, forming stability, and process flexibility. Bucher Emhart Glass describes its NIS as a servo-electric driven forming solution, while Heye highlights servo technology for speed, flexibility, and closed-loop forming automation.

Global production capacity is approximately 150 units.

In 2025, global sales reached approximately 70 units, with an average price of around million US\$ 4.54 per unit, gross margin around 32%.

The Servo IS Machine market has stronger growth potential than traditional mechanical or pneumatic IS machines because glass plants are upgrading toward precision forming, automation, and digital control. Servo technology improves repeatability, setup efficiency, motion flexibility, lightweight container capability, and production consistency, making it attractive for high-speed and premium glass container lines. However, high capital cost, technical complexity, maintenance requirements, and operator training needs may limit adoption among smaller glass producers. In the long term, servo IS machines and hybrid servo upgrades will gain share, while traditional pneumatic machines will remain important in cost-sensitive and mature installed-base markets.

Market trend

The Servo IS Machine market is developing toward full servo-electric forming, hybrid servo-pneumatic systems, closed-loop process control, and smart hot-end production. Glass producers are adopting servo mechanisms to improve motion repeatability, reduce setup time, support faster job changes, and produce lightweight containers with tighter dimensional control. Advanced systems integrate servo feeders, servo shears, servo plungers, servo take-outs, servo pushers, section-level controls, sensors, and digital process platforms. Heye notes that servo technology and closed-loop solutions bring productivity benefits, while Sklostroj's ISS leaflet highlights precise and repeatable servo-electric motion and lower energy consumption.

Market drive

Market demand is driven by glass manufacturers' need for higher productivity, stable quality, reduced defects, lighter container production, and flexible multi-gob operation. Servo IS machines help plants improve forming accuracy, shorten changeover, and reduce dependence on manual adjustment. Demand is also supported by premium glass packaging for beer, wine, spirits, food, pharmaceuticals, cosmetics, and high-value consumer goods, where dimensional consistency and appearance quality are important. Replacement and modernization demand is strong because many plants still operate pneumatic IS machines but want servo upgrades for critical movements such as take-out, pusher, plunger, feeder, and gob delivery.

Upstream and downstream

Upstream suppliers include servo motor and drive manufacturers, motion-control system providers, precision machining companies, steel casting suppliers, mold manufacturers, sensors, encoders, control cabinets, pneumatic components, cooling systems, lubrication systems, refractory parts, and hot-end spare-part producers. Machine manufacturers integrate these components into full servo or hybrid servo IS forming systems. Downstream customers are mainly container glass producers serving beer, wine, spirits, soft drinks, food, pharmaceuticals, cosmetics, perfume, and premium packaging brands. Typical downstream producers include O-I Glass, Ardagh Group, Verallia, Vetropack, Vidrala, Gerresheimer, Saverglass, BA Glass, Vitro, and ?i?ecam.
