With growing demand in downstream market, the Sewage Treatment Facilities is forecast to a readjusted size of US\$ 182130 million by 2030 with a CAGR of 5.4% during review period.

The research report highlights the growth potential of the global Sewage Treatment Facilities market. Sewage Treatment Facilities are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Sewage Treatment Facilities. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Sewage Treatment Facilities market.

Sewage Treatment Facilities companies deal with designing, constructing, operating and maintaining sewage water systems. Sewage utilities treat wastewater from homes, manufacturing plants, commercial and industrial establishments and are generally operated by local or national governments. Sewage utilities handle wastewater through sewage lines. The wastewater is recycled through water treatment plants and the treated water is then supplied to domestic or commercial establishments.

Micro-pollutants which are challenging the treatment capability of conventional wastewater treatment plants are being treated with advanced technologies. Micro-pollutants are contaminants originating from pharmaceutical residues, household chemicals, personal care products and pesticides. Technologies such as moving bed

biofilm reactors (MBBR), ozone-based advanced oxidation, adsorption and powdered activated carbon (PAC) are being used to remove micro-pollutants from wastewater. For instance, in Germany, advanced technologies such as GE's membrane bioreactor and powdered activated carbon technology are proving to be a cost-effective way of removing micro-pollutants from wastewater.
