The global SF₆-Free Gas-Insulated Switchgear market size is predicted to grow from US\$ 529 million in 2025 to US\$ 1343 million in 2032; it is expected to grow at a CAGR of 14.5% from 2026 to 2032.

SF₆-free gas-insulated switchgear is a new type of gas insulating switchgear. It uses environmentally friendly gas instead of SF₆ as the insulating medium, and effectively controls carbon emissions while ensuring high reliability and high safety of the equipment. SF₆ is widely used in human body insulation opening devices due to its excellent insulating properties. However, SF₆ is a very strong greenhouse gas, and its widespread use has added to the speed of global warming. Therefore, the application of SF₆-free gas-insulated switchgear will become a future development trend. In addition, it can also reduce the cost of detection and recovery of SF₆ gas in the process of using SF₆ gas insulation opening equipment for enterprises. In 2024, global SF₆-Free Gas-Insulated Switchgear production reached approximately 3,859 units, with an average global market price of around K US\$ 122.9 per unit.

The key drivers of the SF₆-free gas-insulated switchgear market include increasing global regulations on SF₆ emissions, strong emphasis on carbon neutrality targets, and rising adoption of renewable energy projects requiring sustainable power infrastructure. In addition, growing urbanization and the need for compact, high-performance electrical substations encourage utilities to shift toward SF₆-free GIS solutions that meet both environmental and operational efficiency standards.
