The global SF6 Gas Decomposition Product Tester market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

SF6 gas decomposition product tester is a high-precision, intelligent detection instrument, mainly used to detect the decomposition products of SF6 (sulfur hexafluoride) gas in electrical equipment, such as SO2, H2S, etc. These decomposition products are often associated with the cracking or failure of insulation materials within equipment, so by detecting the levels of these products, the health of electrical equipment can be quickly and accurately determined. The tester uses high-performance electrochemical sensors and embedded microcomputer technology, and has the characteristics of high measurement accuracy, good repeatability, and fast response speed. It is widely used in electric power, railway, metallurgy and petrochemical industries for fault location, routine detection, partial discharge monitoring, gas purification/filtration monitoring, faulty high-voltage contact inspection and inspection of the generation of decomposition products in switches.

United States market for SF6 Gas Decomposition Product Tester is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
