SF6 RMU Alternative Product refers to a new type of medium-voltage power distribution equipment used in Ring Main Unit (RMU) that uses non-SF6 gas or other insulating media as alternative technology. Due to the high greenhouse effect potential (GWP) of SF6 gas, the industry is gradually turning to more environmentally friendly solutions. These alternative products usually use solid insulation, air insulation (AIS), and oil insulation as insulation and arc extinguishing media, aiming to provide the same or even higher performance as SF6 RMU while reducing the impact on the environment. SF6 RMU Alternative Product has the characteristics of superior insulation performance, high reliability, and low maintenance cost. It is suitable for scenarios such as urban distribution networks, industrial facilities, and renewable energy systems, meeting increasingly stringent environmental regulations and market demands.
