The global SFP and SFP+ Electrical Interface Modules market size is predicted to grow from US$ 864 million in 2025 to US$ 1310 million in 2031; it is expected to grow at a CAGR of 7.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

SFP and SFP+ electrical interface modules are small pluggable modules used to realize electrical signal transmission in network equipment. Among them, SFP (Small Form-factor Pluggable) electrical interface module is a small pluggable module. The module uses an RJ45 interface to transmit electrical signals through copper cables. It supports Ethernet protocols (usually 1000BASE-T) and is used in network equipment. The transmission rate can reach 1Gbps. SFP+ (Enhanced Small Form-factor Pluggable) electrical interface module is an enhanced version of SFP, supporting higher transmission rates (usually 10Gbps) while maintaining the same package size as SFP. It is widely used in data centers, enterprise networks, telecommunications networks, etc.

Unlike optical modules that use optical fiber as the signal transmission medium, electrical interface modules use copper cables (such as Cat5e/Cat6) as the transmission medium to achieve high-speed transmission of electrical signals over short distances (usually 30 to 100 meters). The most common physical connection interface is the RJ45 interface, which is embedded in the front of the module for easy docking with standard Ethernet copper cables. The electrical port module essentially integrates the RJ45 connector and the electrical PHY functional circuit, and is inserted into the

module slot of the network device through the standard SFP or SFP+ gold finger on its back to achieve modular, hot-swappable, and flexible expansion of electrical port connections. Because its appearance is consistent with that of the optical module, the electrical port module is also commonly called the SFP electrical port module or Copper SFP/SFP+, supporting multiple speed levels such as 1Gbps and 10Gbps. SFP can support 1 Gbps speed and is compatible with 1000BASE-T modules, and SFP+ can support 10 Gbps speed and is compatible with 10GBASE-T modules. Through the electrical port module, network equipment manufacturers can achieve flexible configuration and deployment of electrical/optical ports without changing the motherboard design, which significantly improves the maintainability and cost-effectiveness of the system. It is an indispensable component in the current optoelectronic hybrid network architecture.
