Shaft Generator for Marine Industry is a type of marine power generator primarily composed of a base, a stator, and a rotor positioned within the base. The base is fixed to the ship deck through a steel plate base and utilizes a water-cooling structure. Permanent magnet blocks are attached to the rotor surface, and the rotor shaft connects to the engine via a diaphragm coupling. The electricity generated by the stator is supplied to the ship's loads through a frequency converter, significantly enhancing system efficiency, reducing maintenance intensity, minimizing overall vibration, and protecting both the generator bearings and the engine crankshaft.
